

DANIMEX SOLUTIONS USER CASE: FESTIVAL

INTRODUCTION

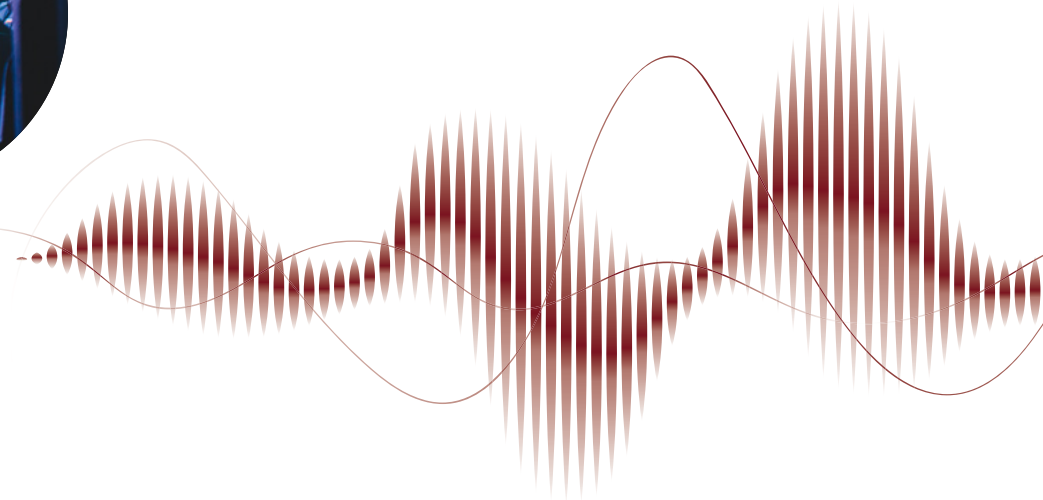

SEAMLESS COMMUNICATION FOR FESTIVALS

We enhance music festivals with cutting-edge tools for coordination, management, and safety. With Digital Mobile Radio (DMR) and Push-to-Talk Over Cellular (POC), event organisers, security teams, and vendors stay connected, even during network congestion. TRBOnet's control room software integrates these systems, offering centralised monitoring and geo-fencing to secure restricted areas.

ADVANCED SECURITY AND SUSTAINABILITY

CCTV surveillance ensures real-time monitoring of key zones like entrances, campsites, and stages, helping prevent overcrowding and unauthorised access while supporting quick incident responses. Eco-friendly power solutions further boost efficiency, powering stages, booths, and staff devices with minimal environmental impact - aligning with festival sustainability goals.

Our technology delivers operational excellence, guest satisfaction, and security while supporting green initiatives, making every festival safe, efficient, and unforgettable.

FUNCTIONS AND FEATURES

DMR & POC FOR SEAMLESS FESTIVAL COMMUNICATIONS

DMR and POC technologies are indispensable for maintaining seamless communication across a festival site. DMR offers crystal-clear audio and robust coverage, ensuring staff can communicate effectively even in remote areas or during extreme weather.

PUSH-TO-TALK (POC) SYSTEMS

PoC extends this reliability by integrating cellular networks, allowing instant push-to-talk communication with global reach. Together, these systems eliminate the challenges of network congestion that often occur during large events. They also enable real-time coordination between teams, from security and logistics to stage management, ensuring quick responses to emergencies, schedule changes, or operational needs.

This versatility makes DMR and PoC essential tools for enhancing safety and efficiency.

CAMPSITE MANAGEMENT & CONTROL ROOM

Effective campsite management is critical for guest safety and comfort. With TRBOnet's control room technology, organisers can monitor campsite activity in real time, deploying staff as needed to manage crowd flow, address issues, and ensure a clean, secure environment.

Geo-fencing and DMR communications ensure a smooth and controlled camping experience.

ENHANCED SECURITY

Our advanced security solutions, including CCTV and DMR, ensure a safe environment for all. Security personnel can maintain constant communication via PoC, while surveillance systems provide comprehensive coverage to detect and address threats swiftly, safeguarding attendees and assets.

FUNCTIONS AND FEATURES

GUEST COMMUNICATIONS - INCLUDING WI-FI

Seamless guest communication is key to a positive festival experience. We provide secure Wi-Fi solutions to keep attendees connected while also supporting mobile apps for schedules, maps, and emergency notifications. Whether checking in with loved ones or accessing event updates, reliable connectivity enhances the overall experience.

ECO-FRIENDLY POWER SOLUTIONS FOR THE SITE AND STAFF

Our eco-friendly power solutions are tailored for festivals, supporting both large-scale infrastructure and individual staff needs.

SOLAR POWER

Solar-powered battery systems can power stages, lighting, and vendor booths with zero emissions, significantly reducing the event's carbon footprint. Portable energy solutions, such as solar chargers, keep staff connected in the field by powering communication devices and tools without relying on fossil fuels.

SUSTAINABLE SOLUTIONS

These solutions ensure reliable, renewable energy for all operations while demonstrating a commitment to sustainability, appealing to eco-conscious festivalgoers and reducing the environmental impact of large-scale events.
